Product Highlights

Infliximab ELISA Kit

Infliximab is a chimeric monoclonal antibody used to treat auto-immune disorders. It reduces the amount of active human tumour necrosis factor (hTNF α) in the body by binding to it and preventing it from signalling the receptors for TNF α on the surface of various cell types. Infliximab is used for the treatment of psoriasis, Crohn's disease, ankylosing spondylitis, psoriatic arthritis, rheumatoid arthritis, ulcerative colitis.

Bevacizumab ELISA Kit

Bevacizumab is a recombinant human IgG1 monoclonal antibody specific for all human vascular endothelial growth factor-A (VEGF-A) isoforms. The humanized anti-VEGF monoclonal antibody, bevacizumab, has been approved by the FDA as a first-line treatment for metastatic colorectal cancer in combination with chemotherapy. The pharmacokinetic properties of bevacizumab are consistent with a typical humanized monoclonal antibody.
